Description

EV A new range of glass and dishwashers by Prodis. Designed from the ground up to be user friendly, energy efficient, intelligent and hygienic. The bright LED display can easily be read in low light situations allowing easy operation in pubs, clubs and bars. User friendly, intuitive and informative. The large LED control panel features a bright colour coded display with easy to read illuminated buttons. This allows for easy operation and makes staff training effortless due to its simplicity.

Total control of the wash is achieved by 5 different time cycles allowing lightly soiled glasses to be washed on a shorter cycle to the more heavier soiled. If activated the rinse tank temperature interlock system holds the wash cycle until a rinse temperature of 82°C is reached ensuring a hygienic final rinse every time.

Combining years of research and development the EV-CLEAN delivers the perfect result every time. The EV wash tank is designed without any obstruction to allow for effortless cleaning. Filters, rack guides and wash arms are ergonomically profiled to allow for easy access and removal.

The innovative system automatically cleans the wash tank whenever the unit is switched off making sure your EV is ready for use the next day with minimal effort. Our advanced EV-FILTER technology has been developed to keep both small and large dirt particles out of the wash system, delivering excellent results while keeping the components clean. The EV-FILTER can be completely disassembled by the end user without the use of tools to make daily cleaning and maintenance easy.

All EV machines are fitted with a soft start wash pump which gradually ramps up the power to prevent chipping and breaking of delicate glassware. EV-LOGiC is our self diagnostic system which monitors the machines performance at all times and displays user friendly error codes which speed up troubleshooting greatly reducing the amount of downtime in the unlikely event of a breakdown. Quick and easy to specify and install all EV machines are fitted as standard with drain pumps, rinse-aid injectors and detergent pumps.
